

ABSTRACT OF THE DISCLOSURE

 An apparatus for supporting injection mixing work comprises a memory † for storing data for supporting injection mixing work, a display ‡ for displaying the data stored in the memory and a controller § for controlling the display. The memory has a patient predictability ~~predicability~~ data file for storing patient predictability ~~predicability~~ data including at least patient predictable ~~predicable~~ information, an injection prescription data file for storing injection prescription data corresponding to the patient predictability ~~predicability~~ data, and a combination related data file for storing combination related data corresponding to each injection of the injection prescription data. The controller displays the predictability ~~predicability~~ data stored in the patient predictability ~~predicability~~ data file according ~~correspondingly~~ to both the injection prescription data corresponding to the patient predictability ~~predicability~~ data and the combination related data of each injection included in the injection prescription data.

AMENDMENTS TO THE SPECIFICATION AND ABSTRACT

Please replace the original specification and abstract with the enclosed substitute specification.
